

#1 Cost-Effective **Databases & Applications** Backup for Businesses and MSPs

Backup from Any Location

VMs, Servers, Endpoints, Cloud VMs, SaaS, DBs/Applications, NAS/File Share

Store Backup Anywhere

On-Premise/Remote Storage, Your Own Public Cloud, BDRCloud

Centralized Management

BDRCloud-Hosted (or) BDRSuite's Self Hosted Management Console

BDRCloud for DB/Application Backup & Recovery

BDRCloud for Databases & Applications offers a comprehensive backup and recovery solution tailored for critical database and application environments. It ensures robust protection for major databases like SQL, MySQL, and applications such as Exchange and SharePoint.

Integrated with multiple features for seamless backup, rapid recovery, and data integrity, BDRCloud addresses challenges such as data loss, system failures, and compliance requirements. The solution provides scalable storage options and rigorous security measures, making it ideal for businesses and MSPs needing reliable and efficient data protection.

Direct-to-Cloud Backups

BDRCloud

Utilize our reliable & secure BDRCloud Storage
BDRCloud on Wasabi | BDRCloud on Amazon S3

Bring Your Own Cloud

Use your existing Private/Public Cloud Storage
**Amazon S3 | Azure Blob | Google Cloud | Wasabi
Backblaze | MinIO | Other S3 Compatible Storage**

Key Features

Database/Application level Backup

Securely backup only the critical databases and applications, ensuring data integrity and facilitating quick recovery to minimize downtime.

SQL Server Backup & Recovery

Backup and quickly restore your SQL Server databases, ensuring that all tables, procedures, and configurations are available and easily recoverable to prevent data loss and downtime.

Image-level Backup

Perform disk-image backup of the machine in which the application/database is running for complete system recovery in the event of a failure.

MySQL Backup & Recovery

Efficiently backup and recover MySQL databases, safeguarding all schemas, tables, and stored procedures, providing reliable data protection and minimizing application downtime.

Microsoft Exchange Server Backup & Recovery

Comprehensive backup for Microsoft Exchange Server, ensuring the protection of critical email data. This allows for quick restoration of mailboxes, emails, tasks, and other data.

SharePoint Server Backup & Recovery

Backup your SharePoint Server data, enabling quick restoration of sites, documents, lists, libraries, and configurations to maintain seamless collaboration and productivity.

Flexible Backup Storage

Supports backup storage across multiple tiers, including onsite/remote storage, BDRCloud, Private/Public cloud, providing flexible options for data protection and disaster recovery.

Cloud-based Management Console

Manage, configure, and monitor all your backups from BDRCloud-hosted centralized management console, accessible from anywhere.

Ransomware Protection & Recovery

Protect your data against ransomware with immutable backups and two-factor authentication, and quickly recover from attacks.

Backup Encryption

Protect your backups with encryption during transit and at rest, and add a custom password for an extra layer of security. This ensures that your sensitive data remains secure against unauthorized access.

Highly Rated
Backup Solution by Customers,
MSPs, Channel Partners

“

We use BDRSuite for backup purposes and provide backup as a service to our customers. My company has been able to create a good income with a relatively small investment in BDRSuite. The flexible hybrid solution that BDRSuite provides along with reasonable pricing made us decide for this product instead of its competitors.
